HSS-9 Model Vest/Harness with Lineman’s Climbing Belt and Suspension Relief/Deer Drag Strap.

WARNING! Read, watch, understand and follow all written and DVD instructions prior to using any part of this product. Failure to read, watch, understand and follow this information can result in not being able to return to the stand and being suspended in the harness after a fall and could cause serious injury or death! Call HSS at 1-877-296-3528 and speak to an HSS representative BEFORE using your vest/harness or any portion of this package if there is ANYTHING about these products or instructions you do not understand! If you call after hours or when a company representative is not available, do not use this product until you speak to an HSS representative who clarifies anything you don’t understand.
WARNING!
Read, watch, understand and follow all written and DVD instructions before using any HSS product! Failure to do so could cause serious injury or death!

Although Hunter Safety System, Inc.(HSS)is dedicated to manufacturing only the safest hunting equipment possible, this goal cannot succeed without the aid of our customers. Common sense in the use and understanding of this product is absolutely necessary. 

Important/caution: Safety and using safe hunting practices are the most important elements of the hunting experience and are your responsibility.

WARNING!!!

If there is ANYTHING about these products, their safe usage or the instructions you do not understand or are uncertain about, call 1-877-296-3528 and speak to an HSS representative who clarifies anything you do not understand BEFORE using it!

A warranty registration form is included with your HSS Vest/Harness. Please fill out the information requested in its entirety and return it to HSS, Inc. 8237 Danville Rd., Danville, Al. 35619. This warranty form must be signed and dated in order for the warranty to be in force. Your signature also acknowledges that you have read and understand the instructions and warnings contained within this booklet and that you recognize their importance.
WARNING!!!

Below are identified critical issues regarding the use of HSS products and/or hunting from an elevated position!

1. Warning! Never wrap the harness’s tether around or across your neck or under your arms. Page 5.

2. Warning! In the event of a fall, DO NOT PANIC! Put your practiced self recovery plan into action, ie suspension relief, self recovery, or other means of rescue. Page 5.

3. Warning! The Prussic knot must be maintained with the shortest distance possible between the tether and the tree. Moving the Prussic knot away from the tree causes a greater falling distance resulting in possible serious injury or death. Page 5.

4. Warning! Always make sure the Prussic Knot has 6 (six) loops around the Rope-Style Tree Strap as can be seen in Figure two. If less than six, DO NOT USE IT! Page 5.

5. Warning! NEVER drag an animal or weight that may cause injury to your back, legs, bones or muscles. If you are presently or have ever experienced problems with your back, bones, legs or muscles, DO NOT use the HSS harness and deer drag strap to drag anything. Page 5.

6. Warning! DO NOT ascend or descend a tree while wearing anything attached to these elastic straps (referred to in instruction #1) or when the straps are adjusted out with slack that may catch or hang onto limbs, steps or other protruding objects. Doing so may cause a fall resulting in serious injury or death. Page 6.

8. Warning! Anytime the vest/harness’s tether is not attached to the tree as per the HSS lineman’s climbing strap instructions, the HSS harness, when used with the HSS lineman’s climbing strap, should be considered a climbing aid only and NOT a fall restraint device. Page 6.

9. Warning! For additional safety while climbing with the LCS, the rope-style tree strap and the harness’s tether MUST be attached to the tree for double connection. (Figure 7) Attaching this secondary connection must take place before leaving the ground. Page 7.

10. Warning! Slide the tether and tree strap upward as you ascend or downward as you descend with the lineman’s climbing strap, staying doubly connected. Failure to do so could cause serious injury or death should a fall occur! Page 7.

11. Warning! Slide the tether and tree strap upward as you ascend or downward as you descend with the lineman’s climbing strap, staying doubly connected. Failure to do so could cause serious injury or death should a fall occur! Page 8.

12. Warning! Anytime the tether is not attached to the tree, your HSS harness is not considered a fall restraint device! Page 8.

13. Warning! If there is ANYTHING about this or any Hunter Safety System product or its instructions that you do not understand, call 1-877-296-3528 and speak to an HSS representative BEFORE using it! Page 8.

14. Warning! NEVER exceed the total weight limit (yourself and gear) specified for the particular model harness you use. Page 9.

15. Warning! DO NOT use this product or hunt from an elevated platform while using drugs of any type without approval from your personal physician or after the consumption of any amount of alcohol. These items can impair your balance, judgment and ability to safely hunt from an elevated position. Page 9.

17. Warning! DO NOT use this product or hunt from an elevated platform unless you are well rested and alert, or if you have in the past or are presently experiencing any back or heart problems or medical condition that could cause a problem while above ground level. You MUST be physically and mentally able to recover to the stand’s platform or ground in the event of a fall. Page 10.

18. Warning! Inspect belts, buckles and tree straps prior to each use. Do not use this vest/ harness if any of these components are not working properly, damaged or show signs of wear. Page 11.

19. Warning! If you have purchased this harness in a sealed package with all instructions, warnings and items listed on page 1 of this instructional booklet, the harness MUST be removed from service five years from the date of purchase. (Be sure to keep your proof of purchase) If you have purchased or obtained this harness as a previously used harness, it must be removed from service five years from the date of manufacture. This date is printed on the tether label. Page 11.
WARNING!!!
Read, watch, understand and follow all written and DVD instructions prior to using this safety system. Failure to read, watch, understand and follow this information can cause serious injury or death! If there is ANYTHING you do not understand or are uncertain about, call 877-296-3528 and speak to an HSS representative BEFORE using this or any HSS product!

ADJUSTING YOUR SAFETY SYSTEM
1. Put the HSS vest/harness (safety system) on and securely fasten the chest/waist buckles together. Listen for a secure, complete snap that indicates they are locked in place. Grab each side of each buckle and pull sharply to make certain it’s locked and secure. Examine the buckle to ensure it is properly buckled.
2. Beneath the left pocket and between the fabric layers, locate the adjustable slide bars attached to the chest/waist straps. These thin, metal adjustment slide-bars are attached to the webbing that connects to the chest/waist buckles found at the middle of your torso (Figure 1)
3. Move the adjustable slide bar forward or back to adjust the vest comfortably snug to your body. The vest should adjust to accommodate both light and heavy clothing. Large adjustments are more easily made while not wearing the safety system. To make a large adjustment, place the safety system on a flat surface, locate the adjustable slide bars, and move them as needed. Make sure all straps are repositioned in place and not twisted after making any adjustments. This can usually be accomplished by picking the vest up by the nylon chest/waist buckles and shaking the vest.
4. Release each leg strap buckle, bring them between your legs, and securely snap them in place putting the left strap to the left leg buckle and right strap to the right leg buckle. Listen for a secure and complete snap indicating they are locked in place. Grab both sides of each buckle and pull sharply to make certain they are locked and secure with no clothing caught in the buckle.
5. Adjust each leg strap length making the webbing comfortably snug to the legs.

ATTACHING YOUR HARNESS TO THE TREE
1. The HSS-9, 4X/5X harness comes standard with a rope-style tree strap while smaller HSS harnesses use a strap style. When viewing the enclosed DVD, you must click the main menu button entitled “Rope-Style Tree Strap” to watch the proper procedure on how to use the rope-style tree strap. The harness portion of the DVD shows the strap style which is not included with the HSS-9, 4X/5X model.
2. To use the rope-style tree strap, place the looped end around the tree and pull the entire rope, Prussic knot and carabiner through the loop. (Figure 2).
3. Place the Prussic knot’s carabiner through the loop located at the end of your safety system’s tether (The tether is the 1-7/8-inch strap that extends out from the base of the back neckline of your HSS vest/harness). (Figure 3)
4. Position the rope-style tree strap at a point above your head while standing in the treestand and slide the Prussic knot until it touches the loop at the tree. (Figure 2). There should be no slack in the tether when in the sitting position. (Figure 5) This will shorten the distance of a fall, possibly allowing you to get back onto the treestand should a fall occur. To prevent any chance of the Prussic knot slipping the length of the rope tie an overhand knot approximately six inches below the Prussic Knot.

5. **Warning!** The Prussic knot must be maintained with the shortest distance possible between the tether and the tree. Moving the Prussic knot away from the tree causes a greater falling distance resulting in possible serious injury or death.

6. **Warning!** Never wrap the harness’s tether around or across your neck or under your arms.

7. **Warning!** Always make sure the Prussic Knot has 6 (six) loops around the Rope-Style Tree Strap as can be seen in figure three. If less than six, DO NOT USE IT!

---

**USING THE SUSPENSION RELIEF STRAP**

1. If you fall and must hang for extended periods of time while waiting for help to arrive, DO NOT PANIC. The suspension relief straps will allow the user to relieve the load on the lower extremities if suspended in the harness and help maintain circulation in the legs and mitigate suspension trauma (Blood pooling). While hanging, take the two straps from your pocket (keep these straps with you and easily accessible at all times) and attach the metal clips to the loop found at the rear bottom portion of the harness. Adjust the straps to a length that will allow you to step up into it and stand thus relieving pressure on your body caused by hanging. (Figure 4)

2. Always keep the suspension relief strap with you and easily accessible at all times when wearing the harness; however, if you drop or lose it, be sure to move your legs often while hanging to maintain a good blood flow. Keep an emergency signal device such as a whistle, small air horn and a cell phone or personal locator beacon in an accessible pocket at all times so that you can contact someone for help. Keep a screw-in step with you as well. This can be used to relieve suspension trauma by inserting it into the tree and stepping onto it.

3. **Note:** Several optional products/systems are available that offer self-recovery or self-extraction from a fall when suspended in a harness. Some systems automatically descend the user while others allow control. One of these product/systems can be considered for use as an additional safety precaution against prolonged suspension and suspension trauma. Be sure to follow the manufacturers’ directions on the safe use of these products/systems.

4. To use the suspension relief strap as a deer drag, place the adjustable loop over the antlers or neck of the harvested animal and connect the clip to the loop located at the rear, bottom of the harness. **WARNING!** NEVER drag an animal or weight that may cause injury to your back, legs, bones or muscles. If you are presently or have ever experienced problems with your back, bones, legs or muscles, DO NOT use the HSS harness and deer drag strap to drag anything.

5. The suspension relief/ deer drag strap and loop located on the lower, rear portion of the harness are to be used as a deer drag or for suspension relief capabilities ONLY. These should NEVER be used to attach or secure yourself to the tree.

---

![6 loops](image1)

**Figure 3**

Adjust the strap to a length that will allow you to step into it and stand, thus relieving pressure on your body caused by hanging.

---

![Figure 4](image2)
USING THE ELASTIC BINOCULAR STRAPS

1. To use the elastic straps located on the upper chest area of the HSS-9, Pro Series safety system for binoculars or a range finder, turn the clips to face outward and adjust the straps to a length that makes the item lay out of the way of the bow string during a shot. When not in use, the straps must be shortened, and the plastic clips must be turned around to rest under the back side of the straps. This makes for a cleaner look and places them out of the way when a shot is taken.

2. **Warning!** DO NOT ascend or descend a tree while wearing anything attached to these elastic straps (referred to in instruction #1) or when the straps are adjusted out with slack that may catch or hang onto limbs, steps or other protruding objects. Doing so may cause a fall resulting in serious injury or death.

USING YOUR HARNESS WITH VARIOUS TREESTAND STYLES

1. When using a climbing treestand, be sure to follow all of the treestand manufacturer’s instructions and warnings with regards to proper usage. Make sure you attach your HSS tether and rope-style tree strap to the tree while at ground level and advance the tree strap up or down as you ascend or descend staying connected to the tree at all times. Always keep the attachment as high as possible. Test your tree attachment by pulling on the tether with each advancement.

2. If using a ladder stand, make sure you comply with the manufacturers instructions and warnings. Once the ladder stand is erected and you have gained access to the platform, it is critical that you attach your tree strap and tether to the tree before engaging in further activities. In order to regain access to the platform in the event of a fall, it is critical that the tree strap is connected so there is no slack in the tether when in the sitting position. (Figure 5)

3. When using a hang-on style treestand, be sure to follow the treestand manufacturer’s instructions and warnings with regard to proper installation and usage. When ascending to an existing hang-on style treestand you must stay attached to the tree from the moment you leave the ground until you return. This can be accomplished with the optional HSS Life Line or with the use of the HSS Lineman’s Climbing Rope and tree strap with tether connection staying doubly attached. Upon reaching the stand, disconnect the tree strap and reconnect it and the tether above the stand. Disconnect the lineman’s climbing rope, and reconnect it above the stand. Remain doubly attached when stepping down into the center of the stand. Once secured in the stand, you can remove the lineman’s climbing rope. Only when advancing above or below a limb or treestand should the tether/tree strap or lineman’s climbing rope be removed.

4. **Warning!** Anytime the vest/harness’s tether and tree strap are not attached to the tree as per these instructions, the HSS harness, when used with the HSS lineman’s climbing rope, should be considered a climbing aid only and NOT a fall restraint device.

Figure 5

There should be no slack in the tether while in the sitting position
NOTE: Although Hunter Safety System, Inc. is dedicated to manufacturing only the safest hunting equipment possible, hunting safety cannot succeed without the aid of our customers. Common sense in the use and understanding of this product is absolutely necessary.

Remember: Safety and using safe hunting practices are the most important elements of the hunting experience and are your responsibility. If there is anything about this product, its usage or safety instructions that you do not understand, call 877-296-3528 and speak to an HSS representative before using these products.

Lineman’s Climbing Rope Parts: Lineman’s Climbing Belt, two carabiners

*** Using your Lineman’s Climbing Belt ***

1. Locate the Lineman’s Climbing Belt (LCB) loops which are on the sides of the safety system vest/harness below the side pockets and above the leg buckles. (Figure 6).
2. Insert one LCB carabiner into one of the harness’s LCB loops and make certain that it closes secure with no webbing or clothing caught in the closure.
3. Place the lineman’s climbing rope around the tree to be climbed and clip the remaining carabiner into the harness’s remaining LCB loop. Make certain that the carabiner closes securely with no webbing or clothing interfering with its closure. There MUST be a minimum of 8-inches of slack rope beyond the Prussic Knot.
4. HSS recommends that, for ease of use, right handed hunters keep the Prussic knot on their right side, and left handed hunters keep the knot on their left side.
5. WARNING! For additional safety while climbing with the LCB, the rope-style tree strap and the harness’s tether MUST be attached to the tree for double connection. (Figure 7) Attaching this secondary connection must take place before leaving the ground.
6. Wrap the rope-style tree strap around the tree and follow the attachment instructions on page 4 of this Instructional booklet. Always test the attachment by pulling sharply on the tether/tree strap connection making sure it’s secured to the tree.
7. WARNING! Slide the tether and rope style tree strap upward as you ascend or downward as you descend with the lineman’s climbing rope, staying doubly connected. Failure to do so could cause serious injury or death should a fall occur!

Figure 6

Lineman’s Strap loops are located below the side pockets and above the leg buckles.

Figure 7

The rope-style tree strap with tether and LCB MUST be attached to the tree for double attachment.

NOTE: This photo shows the standard tree strap used with the tether, not the rope style tree strap that comes with the 4X/5X harness.
8. When encountering a limb while climbing, remove and advance the tree strap above (when ascending) or below (when descending) the limb while remaining connected to the tree with the HSS lineman’s climbing rope.  **(Warning! Anytime the tether is not attached to the tree, your HSS harness is not considered a fall restraint device!)** Immediately reconnect the tree strap above (when ascending) or below (when descending) the limb. Only AFTER the tree strap is securely reattached to the tree can the lineman’s climbing rope be removed for advancement above or below the limb. **Only while advancing above or below a limb or treestand should either the tree strap or lineman’s climbing rope be temporarily removed. NEVER have both items removed at the same time!**

9. When hanging a treestand, climb slightly higher than where you will hang the treestand, keeping the lineman’s climbing rope and the tether/tree strap connection as high as possible from the tree stand location. Hang the treestand below the lineman’s climbing rope while keeping the LCR and tether/tree strap attached to the tree. Stay doubly attached! (Figure 8)

10. After securing the tree stand to the tree according to its manufacturer’s instructions, advance the tree strap and lineman’s climbing rope upward remaining doubly attached to a height which allows you to step **down** into the center of the treestand. Once safely on the treestand and while still secured to the tree with the tree strap, you can remove the lineman’s climbing rope.

11. When ascending to an existing treestand, use the HSS lineman’s climbing rope and tree strap with tether connection staying doubly attached. Upon reaching the stand, connect the tree strap and tether above the stand, disconnect the lineman’s climbing rope and reconnect it above the stand. Remain doubly attached when stepping down into the center of the stand. Once secured in the stand, you can remove the lineman’s climbing rope.

12. Anytime the vest/harness’s tether is not attached to the tree as per these instructions, the HSS harness, when used with the HSS lineman’s climbing rope, should be considered a climbing aid only and NOT a fall restraint device.

13. The HSS lineman’s climbing rope must only be used in conjunction with a Hunter Safety System harness.

14. **WARNING!** If there is ANYTHING about this or any Hunter Safety System product or its instructions that you do not understand, call 1-877-296-3528 and speak to an HSS representative BEFORE using it!

---

**Figure 8**

Hang the treestand below the lineman’s climbing strap while keeping the strap **AND** tether/tree strap attached to the tree. **Stay doubly attached!**
Overall Safety Use Instructions and Safe Hunting Practices

WARNING!!!

Read, watch and follow all written and DVD instructions prior to using this safety system. Failure to read, watch, understand and follow this information can cause serious injury or death! Call 1-877-296-3528 and speak to an HSS representative before using your HSS Safety System harness if there is anything you do not understand!

1. Prior to using the HSS Safety System, make sure you read, understand and follow all safe-use instructions, warnings and the product expiration date. Watch the enclosed instructional DVD. If there are any questions concerning the proper usage of this or any HSS product or anything you do not understand in the written or video safe-use instructions, call 1-877-296-3528 and speak to an HSS representative BEFORE using it.

2. When hunting from an elevated position, falls can occur any time after leaving the ground causing injury or death. ALWAYS wear your HSS Safety System and use any additional HSS accessory such as a Life Line or Lineman’s Climbing Strap to stay connected to the tree from the moment you leave the ground until you return to the ground. If you cannot wear your full body safety system for any reason, you MUST hunt from the ground.

3. Keep the provided neck, hang-tag/booklet, safe use instructions with you at all times while hunting aloft for reference. Refer to the safe use instructions annually or anytime you are not certain about using your HSS safety system. If there is anything you are not certain about, call 1-877-296-3528 and speak to an HSS representative before using your safety system. Also, you must give the complete safe use and instructional material to anyone to whom you loan or sell your safety system.

4. Familiarize yourself with the HSS safety system and all its adjustments while at ground level. Also, while slightly above ground level and in the presence of a responsible adult, practice using your safety system to experience the feeling of hanging suspended before using in a hunting environment. (Figure 9)

   Warning! NEVER exceed the total weight limit (yourself and gear) specified for the particular model harness you use.

5. The HSS safety system/fall arrest system is designed to arrest a single fall only. If you experience a fall while wearing this product, return it to HSS for replacement. To replace your harness in the event of a fall, call 1-256-773-7732. (A nominal fee will apply.)

6. WARNING! DO NOT use this product or hunt from an elevated platform while using drugs of any type without approval from your personal physician or after the consumption of any amount of alcohol. These items can impair your balance, judgment and ability to safely hunt from an elevated position.

7. WARNING! DO NOT modify, repair, alter, sew, or cut this product in any way. Doing so may cause serious injury or death.

Figure 9

Have responsible assistance when testing harness near ground level.
8. **WARNING! DO NOT** use this product or hunt from an elevated platform unless you are well rested and alert, or if you have in the past or are presently experiencing any back or heart problems or medical condition that could cause a problem while above ground level. You MUST be physically and mentally able to recover to the stand’s platform or ground in the event of a fall.

9. Never hunt from an elevated position during inclement weather such as rain, lightning, high wind or icy conditions. Always end your hunt and return to the ground immediately if inclement weather conditions arise.

10. Anytime you are ascending, descending, or hunting from an elevated platform, make sure that you are secured to the tree from the moment you leave the ground until the moment you return to the ground. This should be accomplished with the use of one or more of the following: The HSS Lineman’s Climbing Strap and tree strap combination (to stay doubly attached to the tree), or the optional HSS Lifeline with Prussic hitch. The HSS Life Line or Lineman’s Climbing Strap, if lost or damaged, can be purchased at sporting goods stores, on the web at www.hssvest.com or by calling 1-877-296-3528.

11. Always use the HSS Lineman’s Climbing Strap and tether/tree strap according to the manufacturer’s instructions when hanging a fixed position, hang-on style treestand. If lost or damaged, it can be purchased separately as an accessory at numerous sporting goods stores, by calling 1-877-296-3528 or on the web at www.hssvest.com.

12. The Lineman’s Climbing Strap must always be used in conjunction with the rope-style tree strap and tether provided with the HSS vest/harness. To maximize safety, always attach the safety system’s tether and tree strap to the tree along with the lineman’s climbing strap, staying doubly attached while climbing, hanging, or securing a treestand, ladder stick or other accessories to/from the tree.

13. Always maintain 3-point contact when climbing up or down a tree using climbing aids. Proper 3-point contact means having either two feet with one hand or one foot with two hands on the steps of your climbing aid at all times when climbing up/down or in and out of the treestand.

14. When moving to gain access into the treestand with the Lineman’s Climbing Strap and tether/tree strap still attached to the tree, remove and reattach the HSS rope-style tree strap to the tree at a point located above the treestand before disconnecting the lineman’s climbing strap. Once securely attached to the tree by the tether, remove the lineman’s climbing strap and climb above the base of the treestand. Reattach the lineman’s strap to the tree and stay doubly attached to the tree while stepping down into the center of the treestand. Remain doubly attached until you are secure in the stand. Then remove the lineman’s climbing strap.

15. The HSS safety system is only considered a fall restraint device when all chest/waist and leg buckles are closed securely and adjusted comfortably snug in place around the body, and the safety system is attached firmly to the tree by the tether and tree strap according to HSS instructions.

16. Leg straps & buckles must be in the proper position between your legs (left strap/left leg, right strap/right leg) and the chest/waist buckles must be locked closed and checked by pulling sharply on them from the time you leave the ground until you return to the ground.

17. Adjust the chest/waist straps, and two leg straps so they are comfortably snug to the body making sure that all buckles are fastened securely and adjusted properly snug according to HSS safety system instructions before leaving the ground.
18. **Warning!** Inspect belts, buckles and tree straps prior to each use. Do not use this vest/harness if any of these components are not working properly, damaged or show signs of wear.

19 **Warning!** If you have purchased this harness in a sealed package with all instructions, warnings and items listed on page 1 of this instructional booklet, the harness MUST be removed from service five years from the date of purchase. (Be sure to keep your proof of purchase) If you have purchased or obtained this harness as a previously used harness, it must be removed from service five years from the date of manufacture. This date is printed on the tether label.

20 Prepare and practice a rescue, relief and recovery plan should a fall occur. Plan ahead on how you will recover and return to the stand platform or ground in the event of a fall. If a fall occurs, DO NOT PANIC! Remain calm and implement your practiced rescue, relief and recovery plan. Always carry a screw-in tree step and emergency whistle, two-way radio, or cell phone in an accessible pocket of your vest for self-rescue use in the event of a fall.

21 Always inform someone of your hunting location and when to expect your return. Always carry a cell phone or personal locator beacon in case you need help.

22 Always hunt from the ground when escape, self-recovery or the ability to return to the treestand or ground is absent.

23. Never climb up/down or hunt at heights at which you are not completely comfortable.

24. Never connect your harness to any part of the treestand, climbing aids, or tree limbs.

25. Never use your harness to lean out from the treestand for any reason including trimming branches or shooting.

26. NEVER climb a dead, dying, leaning, icy, wet, or loose barked tree. If in doubt as to the condition of the tree, DO NOT CLIMB IT! Never rely on a tree branch for support. Never climb or hunt from a utility pole.

27. User must be 16-years old or older and be physically and mentally able to use the HSS harness without adult supervision and assistance in adjustments, attachments to the tree, and all other concerns relating to the Hunter Safety System. User must be physically and mentally able to recover after a fall has occurred.

28. Youths or minors under 16 years of age must be instructed prior to each use and supervised during use on all safety aspects of use by a responsible adult.

29. Any person under 16 years of age wearing an HSS vest/harness safety system MUST be accompanied by a supervising adult at all times while positioned in a treestand or any platform located above ground level, while ascending to the treestand or descending from it. Let’s protect our youth!

30. To receive the industry’s safe treestand video, call HE Tools at 801-466-9222 or NBEF at 479-649-9036.

**WARNING!!!**

You must always maintain the physical ability to recover to the treestand, tree steps, or the ground! If you cannot recover you MUST hunt from the ground. Follow ALL safety instructions and warnings when positioned above ground level! Safety First! If there is ANYTHING you are in doubt of and do not thoroughly understand about these instructions or the safe use of this product, call 877-296-3528 and speak to an HSS representative BEFORE using it!
LIMITED WARRANTY

This warranty is to the original retail purchaser and covers all materials and labor for the repair or replacement of the product due to defects in workmanship or materials within (1) one year from the date of purchase. This warranty does not cover use or care other than that described in instructions on hang tags and tree strap. Purchaser must read, follow and understand all safety and warranty instructions prior to use. Warning! If there is anything you do not understand about this product, its usage or instructions, call 1-877-296-3528 BEFORE using! Hunter Safety System (HSS, Inc.) reserves the right to determine whether the product shall be repaired or replaced with a like or similar product. All shipping costs are the responsibility of the owner. Defective product, along with proof of purchase, should be sent to: HSS, Inc., 8237 Danville Road, Danville, AL 35619.

THE FOREGOING IS IN LIEU OF ALL OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED (INCLUDING THOSE OF MERCHANTABILITY AND FITNESS OF ANY OTHER PRODUCT FOR A PARTICULAR PURPOSE), AND ANY OF THE OTHER OBLIGATIONS OR LIABILITIES ON THE PART OF THE COMPANY.

LIMITATION OF LIABILITY

It is expressly understood that Hunter Safety System’s liability for its products, whether due to breach of warranty, negligence, strict liability, or otherwise, is limited to the repair of the product, and HSS, Inc. will not be liable for any other injury, loss, or damage to material, arising in connection with the sale, installation, use of, inability to use, or the repair or replacement of Hunter Safety System products. HSS, Inc. accepts NO responsibility for injury or damage incurred when product has been altered or misused (not used according to instructions—for intended purpose).

Hunter Safety System, Inc. reserves the right at any time to make alterations or modifications to its products which, in its opinion, may improve the performance and efficiency of the product. HSS, Inc. shall not be required to make such alterations or modifications to products already in service.
